I have spent 10 years working as a helicopter technician in the Turkish Air Force, where I gained extensive experience in the aviation industry. Following this, I relocated to Norway and worked for 1.5 years at a Hotel Klubben. During this time, I had the opportunity to enhance my communication skills and gain international experience. Currently, I am studying as a backend developer at Noroff School, where I have discovered my passion for software development. I am eagerly learning every aspect of the software development process and dedicating myself to advancing in this dynamic field. The endless creativity and problem-solving opportunities that software offers have always fascinated me. Transforming complex problems into simple and effective solutions has become a passion of mine. I am excited to further develop both my technical skills and collaboration abilities, and I am ready to contribute to new projects. I would be delighted to connect with you to discuss potential opportunities to collaborate on my software development journey.
